

They need product thinking.

Which honestly, as software engineers, we're not trained in. You have to learn it on the side.

You have to do side projects that teach you:

How do I find a problem? What are the minimum
viable features? How do I validate it?

Cool. Code. Ship.

Not my problem anymore. Tell me what to do
next.

So you need somebody with product thinking.

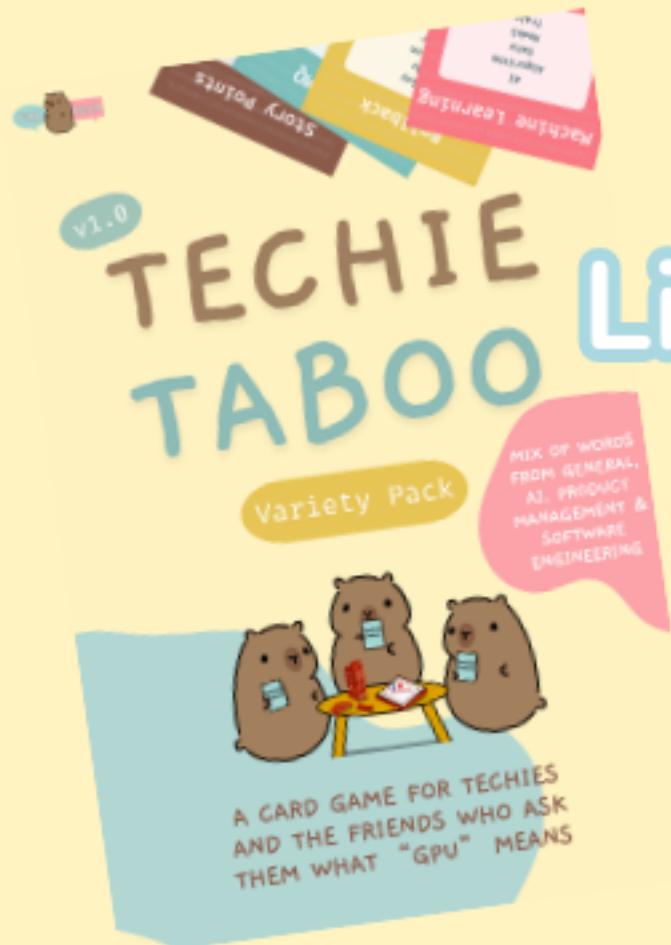

AND the ability to pitch — to explain tech in layman's terms.
